The need for plantation has become even greater these days because of the growing pollution in the environment. Plants and trees take up carbon dioxide that humans exhale from their bodies. Plants and trees play a vital role in lives of human moreover greenery give pleasure to human eyes. Trees provide oxygen and that is necessary for human beings to live .

TEC believes that “ Everyday is a Plantation Day”. To spread the importance of plantation program, NSS Unit of Tirumala Engineering College planned and executed a useful program to create the idea of plantation in human by organizing a rally in Narasaraopet town.

Everyone knows that trees are the natural sources of Oxygen as they inhale Carbon dioxide and exhale Oxygen and without it the survival of human beings is not possible on earth. They filter harmful pollutants from the atmosphere and provide us with fresher and cleaner air to breath. Air pollution can be controlled, if we plant more and more trees. They give us fruits and leaves that serve as food for birds, animals as well as human beings; moreover we get, wood, rubber and raw materials that are used for manufacturing miscellaneous goods such as furniture, doors and a lot more .Trees are habitats of birds and animals. Many animals such as elephants, koalas, and giraffes consume leaves for nourishment. Monkeys go in for the flowers and the sweet nectar is for the birds, bats, and other insects. Like us, the fruits are consumed by the animals too which leads to another process wherein seeds are dispersed over long distances. Many animals, birds, and squirrels reside in them and are happy to dwell in the leaves-covered trees to stay away from predators. Plantation plays an important role in maintaining the balance in nature. It has a great impact on the environment by reducing incidences of global warming.

A tree, in its entirety has the ability to contribute each of its parts to sustain life. From its leaves to the roots and its bark, every part of a tree has something to offer and has profound value. To make you well-equipped with the benefits, here is a breakdown of the categories of perks that trees provide us, free of cost. Climate change and control are also one of the essential functions of trees. The moderate the effects of sun, rain, and wind in order to keep the climate in control. The beaming energy of the sun is absorbed and filtered by the leaves that help to keep a cool temperature around it.

our principal Dr.Y.V Narayana garu initiated the program to create the awareness among the people to plant atleast one tree by one person. To make this happen, NSS Unit TEC conducted the awareness on plantation by conducting an awareness rally.
